This book presents state-of-the-art research into the application of information and communication technologies to travel and tourism. The range of topics covered is broad, encompassing digital marketing and social media, mobile computing and web design, semantic technologies and recommender systems, augmented and virtual reality, electronic distribution and online travel reviews, MOOC and eLearning, eGovernment, and the sharing economy. There is a particular focus on the development of digital strategies, the impact of big data, and the digital economy. In addition to the description of research advances and innovative ideas, readers will find a number of informative industrial case studies. The contents of the book are based on the 2017 ENTER eTourism conference, held in Rome. The volume will be of interest to all academics and practitioners who wish to keep abreast of the latest developments in eTourism.

This book presents the latest research into the application of information and communication technologies within the travel and tourism sectors. In addition to the description of research advances and innovative concepts, a number of informative case studies are presented. The contents of the book are based on the 2018 ENTER eTourism conference, held in J ö nk ö ping, Sweden. The volume will appeal to all academics and practitioners with an interest in the most recent developments in eTourism.

Gastronomy for Tourism Development provides readers with insight into the political reasons all countries in the region pay little attention to the common gastronomic heritage. It challenges the issues faced by those within the industry, addressing the potential for the region to become a sustainable and attractive European food destination.

Tourism and Leisure Behaviour in an Ageing World, based on Ian Patterson's previously published Growing Older, provides an overview of the latest research concerning tourist behaviour and leisure needs of baby boomers, seniors, and older adults. With an increasingly ageing population, industry interest has intensified and there has been a corresponding explosion in related research activity.

This book explores the lessons learned from half a century of Caribbean cruise tourism; one of the most popular and profitable sectors of the tourism industry. The modern-day cruise industry dates from the 1960s when the three major cruise lines, Carnival, Royal Caribbean, and Norwegian, set up shop in Florida and began selling winter cruises to the Caribbean targeting American retirees. For geopolitical reasons, the US initially excluded cruises to Cuba. This changed in 2016, following the historic Obama-Castro agreement to move towards diplomatic, trade and travel normalization. Cuba quickly became the Caribbean ' s fastest growing cruise destination. This book considers the limited economic benefits of cruise tourism, its environmental and social impacts, and the effects of climate change, and "overtourism." Based on this analysis and case studies of key Caribbean and Mediterranean destinations, this book cautions against overdependence on cruise tourism and outlines reforms needed to bring more benefits and equity to Caribbean countries. It will be valuable to professionals, businesses, development agencies, NGOs, and academics interested in a sustainable cruise industry and the economic well-being of Caribbean island nations.

Tourism consumers are increasingly demanding and seek to base their travel decision-making process on relevant and credible tourism information. In recent years, user-generated content on social media, the opinion of travel bloggers, and entertainment programs in the media have influenced the public's travel purchasing behavior and acted as a driving force for the development of tourism products, such as film tourism. It also has played a role in the evolution and development of marketing, giving rise to new applications, as in the case of digital and influence marketing. On the other hand, tourism organizations and destination management organizations face major challenges in communicating the attributes of a tourism product, since this cannot be experienced before consumption. Thus, they need to know how and in which means or platforms of communication they can inform potential consumers. Impact of New Media in Tourism provides theoretical and practical contributions in tourism and communication including current research on the influence of new media and the active role of consumers in tourism. With a focus on decision making and increasing the visibility of products and destinations, the book provides support for tourism agencies and organizations around the world. Covering themes that include digital marketing, social media, and online branding, this book is essential for professionals, academicians, researchers, and students working or studying in the field of tourism and hospitality management, marketing, advertising, and media and communications.

This edited volume explores various issues in family tourism studies and complements the dramatic development of this market segment in China. The book concentrates on family and children tourism, and through its chapters, hopes to enrich the landscape of family tourism in academia. The family market in tourism has received increasing attention over past decades. Yet academic endeavors in this area remain somewhat lacking in depth and scope. In addition to imbalanced contributions from authors of diverse backgrounds, the extant literature suffers from insufficient inclusion of children. Relevant studies are largely limited to conventional tourism destinations such as beaches and cultural attractions. In response to growing academic interest in family tourism, this book is a compilation of eight chapters that attempt to push the scope and boundaries of existing research on family tourism. The chapters in this book were originally published as a special issue of the Journal of China Tourism Research.

This comprehensive volume was put together in response to the growing amount of research on tourism in Asia and an increasing number of authors from Asian countries. It concentrates on two aspects of Asian Tourism: first, the Asian tourists themselves, and second, economic development and tourism in the Asian region. The first part of the collection focuses on three areas: the motivations of different types of Asian tourist; the characteristics and behaviour of particular Asian tourist segments; and, finally, an analysis of specific research issues. The second part of the book then goes on to explore the governance and organisation of tourism in the Asian region, and the nature of Asian growth and competitiveness as it relates to tourism. The articles in this book were originally published in the journal Current Issues in Tourism.

The Evolving Impacts of ICT on Activities and Travel Behavior, Volume Three in the Advances in Transport Policy and Planning series, assesses both successful and unsuccessful practices and policies from around the world on the topic. This new volume highlights ICT as a Resilient Travel Behavior Alternative; The Past, Present and Future of Travel Time Use; The Intersection of Transportation and Telecommunications in Demand Forecasting and Traffic Management; International Journey Planning System to Welcoming MaaS; An Empirical Analysis of the Relationship Between Mobile Internet Usage and Activity-Travel Behavior; Travel Time Perception and Time Use in an Era of Automated Driving, and more.
