General biology text with National Geographic features in each unit and test-taking tips written by the Princeton Review.

Everything you were taught about evolution is wrong.

Is Darwinian evolution really the most successful scientific theory ever proposed--or even the best idea anyone has ever had, as Daniel Dennett once put it? *The Mystery of Evolutionary Mechanisms* provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins, revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory. The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after *Origin of Species*, a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life's origin and diversity. *The Mystery of Evolutionary Mechanisms* calls for an embrace of mystery, understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life.
