Quick Boot is designed to give developers a background in the basic architecture and details of a typical boot sequence. More specifically, this book describes the basic initialization sequence that allows developers the freedom to boot an OS without a fully featured system BIOS. Various specifications provide the basics of both the code bases and the standards. This book also provides insights into optimization techniques for more advanced developers. With proper background information, the required specifications on hand, and diligence, many developers can create quality boot solutions using this text. Pete Dice is Engineering Director of Verifone, where he manages OS Engineering teams in Dublin, Ireland and Riga Latvia. Dice successfully launched Intel(R) Quark(TM), Intel's first generation SoC as well as invented the Intel(R) Galileo(TM) development board and developed a freemium SW strategy to scale Intel IoT gateway features across product lines. He is also credited with architecting the "Moon Island" software stack and business model.

This book provides practical guidance on all aspects of reverse phase protein array (RPPA) technology, which permits the quantification of protein levels in cell or tissue lysates. In addition, the latest results are presented from laboratories across the world where experts are successfully running the challenging RPPA data platform. After an introductory chapter by the inventor of the RPPA technique, the demanding task of lysate preparation is explained. Subsequent chapters review printing platforms and analytical platforms and discuss antibody screening in detail. The role of RPPA data in integrative analyses is thoroughly examined, and the various applications of RPPA, for example to identify molecular targeting drugs or evaluate cancer drug efficacy, are discussed with reference to the latest knowledge. It is hoped that the book will foster the implementation of RPPA by documenting the practical details of the technology and by revealing its great potential. It will be of high value for researchers who plan to build an RPPA platform in their institute and for researchers, clinicians, and companies who use RPPA through collaboration with an existing RPPA facility.
