In what ways is comedy subversive? This vital new book critically considers the importance of comedy in challenging and redefining our relations to race and racism through the lens of political correctness. By viewing comedy as both a constitutive feature of social interaction and as a necessary requirement in the appraisal of what is often deemed to be 'politically correct', this book provides an innovative and multidisciplinary approach to the study of comedy and popular culture. In doing so, it engages with the social and cultural tensions inherent to our understandings of political correctness, arguing that comedy can subversively redefine our approach to 'PC Debates', contestations surrounding free speech and the popular portrayal of political correctness in the media and society. Aided by the work of both Slavoj Žižek and Alenka Zupančič, this unique analysis adopts a psychoanalytic/philosophical framework to explore issues of race, racism and political correctness in the widely acclaimed BBC 'mockumentary', The Office (UK), as well as a variety of television comedies. Drawing from psychoanalysis, social psychology and philosophy, this book will be highly relevant for postgraduate students and academic researchers studying comedy, race/racism, multiculturalism, political correctness and television/film.

Praise for How Learning Works "How Learning Works is the perfect title for this excellent book. Drawing upon new research in psychology, education, and cognitive science, the authors have demystified a complex topic into clear explanations of seven powerful learning principles. Full of great ideas and practical suggestions, all based on solid research evidence, this book is essential reading for instructors at all levels who wish to improve their students' learning." —Barbara Gross Davis, assistant vice chancellor for educational development, University of California, Berkeley, and author, Tools for Teaching "This book is a must-read for every instructor, new or experienced. Although I have been teaching for almost thirty years, as I read this book I found myself resonating with many of its ideas, and I discovered new ways of thinking about teaching." —Eugenia T. Paulus, professor of chemistry, North Hennepin Community College, and 2008 U.S. Community Colleges Professor of the Year from The Carnegie Foundation for the Advancement of Teaching and the Council for Advancement and Support of Education "Thank you Carnegie Mellon for making accessible what has previously been inaccessible to those of us who are not learning scientists. Your focus on the essence of learning combined with concrete examples of the daily challenges of teaching and clear tactical strategies for faculty to consider is a welcome work. I will recommend this book to all my colleagues." —Catherine M. Casserly, senior partner, The Carnegie Foundation for the Advancement of Teaching "As you read about each of the seven basic learning principles in this book, you will find advice that is grounded in learning theory, based on research evidence, relevant to college teaching, and easy to understand. The authors have extensive knowledge and experience in applying the science of learning to college teaching, and they graciously share it with you in this organized and readable book." —From the Foreword by Richard E. Mayer, professor of psychology, University of California, Santa Barbara; coauthor, e-Learning and the Science of Instruction; and author, Multimedia Learning

More than any other textbook, Moore and Parker's "Critical Thinking" has defined the structure and content of the critical thinking course at colleges and universities across the country--and has done so with a witty writing style that students enjoy. Now in full-color, the eighth edition brings the concepts of critical thinking to life in vivid detail, with current examples relevant to today's students. . .

This book is designed to engage students' interest and promote their writing abilities while teaching them to think critically and creatively. Dowden takes an activist stance on critical thinking, asking students to create and revise arguments rather than simply recognizing and criticizing them. His book emphasizes inductive reasoning and the analysis of individual claims in the beginning, leaving deductive arguments for consideration later in the course.
