Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

This publication is a sequel to the 'International Source Book on Environmentally Sound Technologies for Municipal Solid Waste Management'. The urgent need for information on how to deal with wastewater is clearly shown by the fact that nearly 3 billion people are without adequate sanitation and its impact on health, medical bills, consequent loss of economic productivity and environmental degradation. This publication is not a solution to the complex water and sanitation problems faced by many nations, but it does bring together experiences and ideas from all regions of the world. Planners and managers will find this guide useful as it provides many possibilities and contacts.

~~Working People in Alberta~~

Working People in Alberta traces the history of labour in Alberta from the period of First Nations occupation to the present. Drawing on over two hundred interviews with labour leaders, activists, and ordinary working people, as well as on archival records, the volume gives voice to the people who have toiled in Alberta over the centuries. In so doing, it seeks to counter the view of Alberta as a one-class, one-party, one-ideology province, in which distinctions between those who work and those who own are irrelevant. Workers from across the generations tell another tale, of an ongoing collective struggle to improve their economic and social circumstances in the face of a dominant, exploitative elite. Their stories are set within a sequential analysis of provincial politics and economics, supplemented by chapters on women and the labour movement and on minority workers of colour and their quest for social justice. Published on the occasion of the 100th anniversary of the Alberta Federation of Labour, Working People in Alberta contrasts the stories of workers who were union members and those who were not. In its depictions of union organizing drives, strikes, and working-class life in cities and towns, this lavishly illustrated volume creates a composite portrait of the men and women who have worked to build and sustain the province of Alberta.

State of the art information on in situ treatment technologies for hazardous waste-contaminated soils is presented. Describes for each technology: wastes amenable to treatment, ease of application, potential level of treatment available, reliability, secondary impacts and equipment and reagents required.
