Textbook and Color Atlas of Traumatic Injuries to the Teeth encompasses the full scope of acute dental trauma, including all aspects of inter-disciplinary treatment. This fourth edition captures the significant advances which have been made in the subject of dental traumatology, since the publication of the last edition more than a decade ago. The comprehensive nature of the book is designed to appeal to distinguished clinicians and scholars of dental traumatology, whether they be oral surgeons, pediatric dentists, endodontists, or from a related specialist community.

Featuring more than 300 full-color photographs, this atlas is a comprehensive guide to the complex procedures used in assisted reproduction. It shows readers how to utilize the latest technologies and correlates the laboratory and clinical components of assisted reproduction. The book depicts oocytes, embryos, and blastocysts at various stages of division and offers guidelines for assessing oocytes and embryos. The authors give detailed instructions on ovarian stimulation, intracytoplasmic sperm injection, assisted hatching, cryopreservation, extended in vitro culturing, preimplantation genetic diagnosis, and embryo transfer techniques. Close attention is also given to assessment of oocytes and embryos from patients with endometriosis and other pathologies.

The Guild Handbook of Scientific Illustration, Second Edition Sponsored by the Guild of Natural Science Illustrators and written by top illustrators, scientists, and industry experts, The Guild Handbook of Scientific Illustration, Second Edition is an indispensable reference guide for anyone who produces, assigns, or simply appreciates scientific illustration. Offering broad coverage and more than 620 outstanding illustrations, this new edition offers up-to-date coverage on all aspects of this specialized field, from illustrating molecules and 3D modeling to important material and advice on copyright and contractual concerns, as well as establishing a freelance business. With step-by-step instructions, in-depth coverage of illustrative techniques and related tools, and helpful advice on the day-to-day business of scientific illustrating, it is easy to see why scientific illustrators refer to this book as their "bible."

While scientific and socio-political communities around the world are aware of the natural and economic importance of biodiversity, we are faced with an ever-increasing number of plant species under threat of extinction. Conservation is thus a vital part of the plant scientist's work, in the field, in botanic gardens and in universities. This colour

A pocket atlas flexibook on this dynamic and wide-ranging field, indispensable for students of medicine and biology alike. Complex processes are well-illustrated in clear images that are not burdened with unnecessary details. Following an introductory part and a section on laboratory methods in immunology, the bulk of the book concentrates on the manifestations of immunological diseases in the human body, providing comprehensive capsule descriptions of all common immune diseases.

This volume describes culture media and solutions used in human ART; how they have been developed for in vitro human pre-implantation embryo development, the function and importance of the various components in media and solutions and how they interact, and how the systems in which these are used can influence outcomes. Chapters discuss inorganic solutes, energy substrates, amino acids, macromolecules, cytokines, growth factors, buffers, pH, osmolality, and the interaction of these parameters. The role of incubators and other physical factors are reviewed, along with the relevance and prospects of emerging technologies: morphokinetic analysis using time-lapse imaging and dynamic fluid incubation systems. Results of prospective randomized trials are emphasized to ascertain the added value of these techniques for selecting viable embryos. This comprehensive guide will be invaluable for embryologists, physicians and all personnel involved in the fluid products used in human ART seeking to optimize their successful use of these components.

"The Color Atlas covers all the main aspects of the dual botanical themes of propagation and conservation. Case studies, extensive color illustrations, and photomicrographs illustrate key concepts and techniques. Each chapter is written by an authority on the specific topic."--Publisher's description.

Representing the state-of-the-art in neurochemical mapping, Chemoarchitectonic Atlas of the Developing Mouse Brain provides a complete, full-color look at the developing mouse brain. Hundreds of coronal sections are presented, clearly illustrating structures at progressive stages of brain development.

With its highly templated, easy-to-use format and new information throughout, the third edition of Hematopathology, a volume in the Foundations in Diagnostic Pathology series, is an essential text for residents and pathologists. Throughout this practical reference, traditional morphologic diagnostic pathology is supplemented with clinical, immunohistochemical, and molecular genetic information. Fully revised to include recent advances in the field, this affordable resource by Dr. Eric D. Hsi is ideal for study and review as well as everyday clinical practice. A highly templated format that includes clinical, imaging, and management/prognostic features; pathologic features; ancillary studies; differential diagnosis; and selected bibliography. A focus on the specific features of various entities, including differential diagnoses. Clinical features, pathologic features, and key facts summarized in quick-reference boxes for fast retrieval of information. Hundreds of full-color photomicrographs and gross photographs depict important pathologic features, enabling you to form a differential diagnosis and compare your findings with actual cases. Contributions from internationally recognized pathologists, keeping you up to date with the latest information in the field. New information on the pathology of hematological disease and the latest World Health Organization update on classification of hematologic malignancies. New chapter on the essentials of hemostasis. Completely revised chapter on platelets

What are the best transit cities in the US? The best Bus Rapid Transit lines? The most useless rail transit lines? The missed opportunities? In the US, the 25 largest metropolitan areas and many smaller cities have fixed guideway transit—rail or bus rapid transit. Nearly all of them are talking about expanding. Yet discussions about transit are still remarkably unsophisticated. To build good transit, the discussion needs to focus on what matters—quality of service (not the technology that delivers it), all kinds of transit riders, the role of buildings, streets and sidewalks, and, above all, getting transit in the right places. Christof Spieler has spent over a decade advocating for transit as a writer, community leader, urban planner, transit board member, and enthusiast. He strongly believes that just about anyone—regardless of training or experience—can identify what makes good transit with the right information. In the fun and accessible *Trains, Buses, People: An Opinionated Atlas of US Transit*, Spieler shows how cities can build successful transit. He profiles the 47 metropolitan areas in the US that have rail transit or BRT, using data, photos, and maps for easy comparison. The best and worst systems are ranked and Spieler offers analysis of how geography, politics, and history complicate transit planning. He shows how the unique circumstances of every city have resulted in very different transit systems. Using appealing visuals, *Trains, Buses, People* is intended for non-experts—it will help any citizen, professional, or policymaker with a vested interest evaluate a transit proposal and understand what makes transit effective. While the book is built on data, it has a strong point of view. Spieler takes an honest look at what makes good and bad transit and is not afraid to look at what went wrong. He explains broad concepts, but recognizes all of the technical, geographical, and political difficulties of building transit in the real world. In the end, *Trains, Buses, People* shows that it is possible with the right tools to build good transit.
