But the reading of the DNA/RNA to make proteins, and the replication of DNA or RNA to make new cells (reproduction, the mark of 'life') both depend on a large suite of proteins that are coded on the DNA/RNA. Both the DNA/RNA and the proteins need to be present at the same time for life to begin—a serious chicken-and-egg conundrum.

According to Scripture, God created "the heavens and the earth" fully formed and functioning in six days, about 6,000 years ago (around 4000 BC). The context of Genesis 1, as well as other places in the Bible, make it clear that these days were ordinary, 24-hour days. God's original creation was perfect, with no death or suffering.

The producer of the "Creatures" computer game that allows players to create artificial life explores the philosophical, ethical, and scientific issues surrounding this controversial topic.

Mankind now has within its grasp the power to synthesize true artificial life, playing out Dr Frankenstein's dream in both cyberspace and the real world. In this book, Steve Grand, a leading exponent of artificial life, provides the first authoritative and comprehensive tour of the frontiers of this burgeoning new creation. He surveys what has been achieved so far and looks at future possibilities for generating autonomous, intelligent, even conscious living things. The fundamental questions he tackles range widely: what is life? What should the minds, brains and bodies of these new life forms be like? What philosophical guidelines and computational frameworks are necessary? At the heart of this brilliantly accessible and thought-provoking book is the author's unique imaginative vision - a vision based on his experience of making some of the most advanced artificial life currently available.

'You will not find a better, more balanced or up-to-date take on either the origin of life or synthetic biology. Essential reading' Observer Creation by Adam Rutherford tells the entire spellbinding story of life in two gripping narratives. 'Prepare to be astounded. There are moments when this book is so gripping it reads like a thriller' Mail on Sunday The Origin of Life is a four-billion-year detective story that uses the latest science to explain what life is and where it first came from, dealing with life's biggest questions and arriving at a thrilling answer. 'A superbly written explanation' Brian Cox The Future of Life introduces an extraordinary technological revolution: 'synthetic biology', the ability to create entirely new life forms within the lab. Adam Rutherford explains how this remarkable innovation works and presents a powerful argument for its benefit to humankind. 'The reader's sense of awe at the well-nigh inconceivable nature of nature is suitably awakened. The extraordinary science and Rutherford's argument are worth every reader's scrutiny. Fascinating' Sunday Telegraph 'One of the most eloquent and genuinely thoughtful books on science over the past decade. You will not find a better, more balanced or up-to-date take on the origin of life or synthetic biology. Essential reading for anyone interested in the coming revolution, which could indeed rival the Industrial Revolution or the internet' Observer 'The perfect primer on the past and future of DNA' Guardian 'Suseful, erudite and thrilling' Prospect 'A witty, engaging and eye-opening explanation of the basic units of life, right back to our common ancestors and on to their incredible synthetic future. The mark of a really good science book, it shows that the questions we still have are just as exciting as the answers we already know' Dara O Briain 'This is a quite delightful two-books-in-one. Rutherford's lightness of touch in describing the dizzying complexity of life at the cellular level in The Origin of Life only serves to emphasise the sheer scale and ambition of the emerging field of synthetic biology' Jim Al Khalili 'A fascinating glimpse into our past and future. Rutherford's illuminating book is full of optimism about what we might be able to achieve' Sunday Times 'Fresh, original and excellent. An eye-opening look at how we are modifying and constructing life. Totally fascinating' PopularScience.co.uk 'In this book of two halves, Rutherford tells the epic history of life on earth, and eloquently argues the case for embracing technology which allows us to become biological designers' Alice Roberts 'An engaging account of both the mystery of life's origin and its impending resolution as well as a fascinating glimpse of the impending birth of a new, synthetic biology' Matt Ridley, author of Genome 'I warmly recommend Creation. Rutherford's academic background in genetics gives him a firm grasp of the intricacies of biochemistry - and he translates these superbly into clear English' Financial Times Dr Adam Rutherford is a geneticist, writer and broadcaster. He presents BBC Radio 4's weekly programme Inside Science and his documentaries include the award-winning series The Cell (BBC4), The Gene Code (BBC4), Horizon: 'Playing God' (BBC2) as well as numerous other programmes for BBC Radio 4. This is his first book.

"How scientists are closer than ever to not only uncovering the mystery of how life was created, but to replicating that moment Within the first billion years after this planet formed, a spark of life spontaneously ignited, turning inanimate chemicals into what we now would recognize as a living thing: a cell. Four billion years later, science has catalogued more than a million species. Science writer Adam Rutherford shows how unprecedented advances in our understanding of life have equipped us with the ability to create entirely new life-forms: goats that produce spider silk in their milk, bacteria that excrete diesel, genetic codes that identify and destroy cancer cells. This new synthetic biology is poised to offer radical new solutions to the crises of food shortage, pandemic disease, and climate change. By charting the history of our evolution, questioning what life really is, and identifying the milestones in our understanding of biological processes, Rutherford shows how this frontier of science will kickstart an industrial revolution that will dominate the rest of this century"--Provided by publisher.

Creation Life is an exciting plan for changing your life. Rightly applied, you will achieve mental, physical, spiritual and emotional well being. Each letter of the word CREATION stands for one of the eight principles drawn from the Genesis story. Choice - Rest - Environment - Activity - Trust - Interpersonal relationships - Outlook - Nutrition. These eight essential components meld together to form the blueprint for health we yearn for and the life we are intended to live. Some of the concepts presented in the CREATION Life acronym will seem like common sense because they are exactly that. Other concepts you may not have been as familiar with but will learn through the evidence of science.

Life as Art synthesizes a number of aesthetic theories in philosophy after 1850 and shows the ways in which they contribute to a unified field of analysis and potential implementation. The book is framed both as a secondary text, analyzing 19th and 20th Century aesthetics, and a primary argument for the viability of life as art as a unified philosophical position.

The book that launched a movement: "Wilson speaks with a humane eloquence which calls to us all" (Oliver Sacks). Called "one of the greatest men alive" by The Times of London, E. O. Wilson proposes an historic partnership between scientists and religious leaders to preserve Earth's rapidly vanishing biodiversity.

"Look at the birds of the air; they do not sow or reap or store away in barns, and yet your heavenly Father feeds them. Are you not much more valuable than they?" --MATTHEW 6:26 God of All Creation recounts how a miniature dachshund taught her owner, James Robison, profound insights about life, faith, and God's care for all of His creation. A devoted dog lover and co-host of the television program Life Today, James shares how the antics of his own dog, Princess, as well as observations from all animals in creation, reveal "expressions of God's love, lessons of His grace, warnings about sin, and other eternal truths." Heart-warming stories and winsome line drawings bring to life the lessons James has learned from his pets and creatures living in the wild. And through his inspiration and spiritual insights, you, too, will learn to know God's voice, to submit to Him, and to trust Him with your every need. "I love that James did this book!" --BETH MOORE "You are about to read some poignant lessons we can learn from pets and all creatures--a clear revelation of the love God has for each of us. I share what I've learned as I've watched, held, and loved our little Princess and as I've watched wild animals in nature. Only a God who truly loves us as individuals could bless us with such treasured moments with our pets and wildlife, if we will just take notice... "A friend once said, 'If you can't see God in everything, you won't see God in anything.' In this book we will explore...eternal truths as we consider our pets and other awesome residents of God's vast creation." --JAMES ROBISON

The epic story of the scientists through the ages who have sought answers to life's biggest mystery: How did it begin? In this essential and illuminating history of Western science, Bill Mesler and H. James Cleaves II seek to answer the most crucial question in science: How did life begin? They trace the trials and triumphs of the iconoclastic scientists who have sought to solve the mystery, from Darwin's theory of evolution to Crick and Watson's unveiling of DNA. This fascinating exploration not only examines the origin-of-life question, but also interrogates the very nature of scientific discovery and objectivity.

An easy-to-understand guide to creation that explains DNA, embryo development, fossils, early man, symbiosis, genetics, and other related topics.
