Youth, Education, and the Role of Society examines the "learning landscape" currently available to American adolescents, arguing that we need to expand, enrich, and diversify the learning opportunities available to young people today. Central to the book is Robert Halpern's view that we depend too exclusively on schools to meet the full range of young people's developmental needs. "High school learning as typically structured is just too fragmented, isolated, and abstract to meet young people's developmental needs," he argues. "It relies too much on century-old curriculum and pedagogy, and is too oriented, in an unreflective way, toward preparing young people for four-year college." As Halpern notes, school leaders are already aware of the limitations posed by traditional high schools and are aiming for reformed school institutions and curricula. However, he contends that

"better meeting young people's learning and developmental needs will require far more than a reconceptualized high school experience. It will mean a fundamentally different understanding of where learning can take place and the wholehearted participation of a variety of institutions and sectors of society."The book's initial chapters explore the nature of productive learning experiences for adolescents. The volume then looks at how various institutions--including schools, after-schools, businesses, and nonprofit and civic organizations--can make unique and indispensable contributions to those crucial learning experiences. Halpern also considers how other countries "structure learning" during these formative years, and he concludes with an exploration of the social and cultural challenges ahead--challenges we must meet, he argues, if we are to enlist and sustain the necessary participation of institutions and adults in an expanded and enriched

Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational
