Engineering, at its origins, was a

profession of
problem solving.
The classic text,
Dialogues
Concerning Two
New Sciences by
Galileo Galilei is
revisited in this
ambitious and
comprehensive
book by Milton
Shaw. In-depth
discussions of
passages from the

Download File PDF

Galileo text emphasize the ""mind set"" of engineering, specifically the roles played by experimentation and dialog in analysis and creativity. In the epilogue, the author points out that engineering students are

Download File PDF

usually exposed to two types of faculty. The first type is mathematically oriented and mostly interested in analytical solutions. The second type is interested in devising and experimenting with innovative

Download File

PDF

solutions. However, since many talented graduates move directly into teaching instead of gaining real world experience, an imbalance of analytical teaching has occurred. Shaw points out through an example by Dr. Dave Lineback that learning to solve

practical engineering problems is a very important part of an engineer's education, but is often denied due to expense and time and effort required. This book fills in many of the gaps in engineering education by showing students,
