Instructional Strategies for Middle and High School Social Studies: Methods, Assessment, and Classroom Management is an exciting methods-based text that integrates appropriate management and assessment techniques with seven distinct teaching strategies. Writing explicitly for pre-service social studies teachers, veteran teacher educator Bruce E. Larson offers detailed descriptions of a range of instructional strategies, along with guidelines for deciding how and when to use each. Part I offers the foundations for teaching and learning in a social studies classroom, and explores contextual, theoretical, and policy factors that all teachers need to consider before entering the classroom. Part II delivers a range of comprehensive strategies for providing instruction that is appropriate for particular lessons, student abilities, and classroom environments. The practical strategies in Part II build upon the learning theories described in Part I, positioning Instructional Strategies for Middle and High School Social Studies to be the go-to, all-inclusive teacher's guide to the social studies

classroom. New to this Edition A list of goals before each chapter presents an overview of the chapter's content focus, and provides an outline for the chapter review. Extensively revised Part I (chapters 1–4) provides an updated review of national standards developed for teaching history, geography, civics, and economics. In-depth applications of the Common Core State Standards for the social studies are also explored. New "Reality Check" feature provides directions for integrating field-based experiences into the chapters, and contextualizes the ideas in the book for a classroom setting. Each chapter in Part II (chapters 5–11) has been expanded to include a section labeled "Enhancing Student Learning with Technology," offering websites, links, and other resources for integrating recent technologies into the classroom. Chapters 5–11 include a new "Making Your Lesson More Meaningful for ELLs" feature, which provides ideas—based on current research and theories about learning language—for engaging ELLs, specific for each instructional strategy. Expanded discussion of the "Understanding by Design" model equips teachers to design learning experiences that promote student understanding by intentionally designing what happens in the classroom, and developing authentic formative assessments of student learning.

The Developing Core Literacy Proficiencies program is an integrated set of English Language Arts/Literacy

units spanning grades 6-12 that provide student-centered instruction on a set of literacy proficiencies at the heart of the Common Core State Standards (CCSS). Reading Closely for Textual Details Making Evidence-Based Claims Making Evidence-Based Claims about Literary Technique (Grades 9-12) Researching to Deepen Understanding Building Evidence-Based Arguments The program approaches literacy through the development of knowledge, literacy skills, and academic habits. Throughout the activities, students develop their literacy along these three paths in an integrated, engaging, and empowering way. Knowledge: The texts and topics students encounter in the program have been carefully selected to expose them to rich and varied ideas and perspectives of cultural significance. These texts not only equip students with key ideas for participating knowledgeably in the important discussions of our time, but also contain the complexity of expression necessary for developing college- and career-ready literacy skills. Literacy Skills: The program articulates and targets instruction and assessment on twenty CCSS-aligned literacy skills ranging from “making inferences” to “reflecting critically.” Students focus on this set of twenty skills throughout the year and program, continually applying them in new and more sophisticated ways. Academic Habits: The program articulates twelve academic habits for students to develop, apply, and extend as they progress through the sequence of instruction. Instructional notes allow teachers to introduce and discuss academic habits such as “preparing” and “completing tasks” that are essential to students’ success in the classroom. The program

materials include a comprehensive set of instructional sequences, teacher notes, handouts, assessments, rubrics, and graphic organizers designed to support students with a diversity of educational experiences and needs. The integrated assessment system, centered around the literacy skills and academic habits, allows for the coherent evaluation of student literacy development over the course of the year and vertically across all grade levels.

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and
