This book is designed to be a working aid to anyone faced with the task of working with surfactants, or their derivative detergents. All authors have substantial industrial experience, either as corporate employees or as long-term consultants to industry. Contents: Characterization of Surfactants. Industrial Synthesis of Surfactants. Analysis of Surfactants. Industrial Applications. Domestic Cleaning Applications. Properties of Surfactant Mixtures. Appendix. Glossary.

Handbook of Surfactant Analysis: Chemical, physico-chemical and physical methods is a translation of the successful German book *Analyse der Tenside*, and incorporates the leading chemical, physio-chemical and physical methods of surfactant analysis, with special emphasis on infrared spectroscopy. Since the first edition of *Analyse der Tenside* (1962) no other book has come close to dealing exclusively with the many analytical methods for this important group of substances. The scope of this book is broad, with coverage not only of analytical data, but also of important data relevant to the industrial production and uses of various classes of compounds. The

fundamental principles and applications of modern spectroscopic and electroanalytical techniques, now playing an increasingly important role as routine methods in analytical practice, are also described. The book is richly and informatively illustrated and includes a comprehensive and up-to-date bibliography. Chapter topics include: * Structural characteristics and classifications of surfactants * Sample preparation, isolation and characterisation of surfactants * Detection of interfacially active ions * Controlled decomposition * Separation of mixtures of surfactants * Methods of quantitative analysis of surfactants * Spectrometry and electrometry * Other physical and physico-chemical methods

An Examination of Detergent Applications The fifth volume in a six volume project penned by detergent industry experts, this segment deals with the various applications of detergent formulations – surfactants, builders, sequestering/chelating agents – as well as other components. These applications are discussed with respect to the scope of their domestic, institutional, or industrial usages. Special focus is given to technological advancement, health and environmental concerns, and the rapid changes occurring in the field within the past several years. With each chapter providing the special access of a pioneering researcher, this text offers an insider's

look at the most current advances.

Part A of this handbook describes the raw materials and potential interactions of detergent products before, during and after use, focusing on the development and mechanisms of action of cleaning components. The text presents the basic physiochemical concepts necessary to formulate new, safer and more effective detergent products.

With contributions from experts and pioneers, this set provides readers with the tools they need to answer the need for sustainable development faced by the industry. The six volumes constitute a shift from the

The second Edition of this useful book describes almost 2900 surfactants which are currently available for industrial use. The book will be of value to technical and managerial personnel involved in the specification and use of these products. The information has been developed directly from information received from 46 surfactant suppliers. Industrial surfactants find uses in almost every industry, from asphalt manufacturing to carpet fibers, from pulp and paper production to leather processing.

Examples of the types of chemicals used as surfactants are fatty alcohol sulfates, alkanolamides, alkoxyates, sulfosuccinates, amines, quaternaries, phosphate esters, acid esters, block copolymers, betaines, imidazolines, alkyl sulfonates, etc. The market for these products has, and is expected to continue to have, a steady growth rate, of the order of 2% per year. Surfactants, besides their widely recognized use in soaps and detergents, find use as, or in, floor strippers, engine degreasers, corrosion inhibitors, hard surface cleaners, fabric softeners, paint dispersants, cutting fluids, anti-stats, viscosity builders, rinse aids mold release agents, foam generators, foam stabilizers, etc. The data included
