Multiple Choice.

In Excellence Gaps in Education, Jonathan A. Plucker and Scott J. Peters shine a spotlight on “excellence gaps”—the achievement gaps among subgroups of students performing at the highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. Excellence Gaps in Education has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds.

The Career Information Coordinator Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: Acquiring and maintaining employment; Principles and practices of employment counseling; Case histories of employment clients; Supervision; Preparing written material; and more.

Reprinted from "NAEP 1992 Reading Report Card for the Nation and the States." I be reading at the advanced level. A much higher percent of White Americans are performing at the proficient and advanced levels.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Managing School Districts for High Performance applies over twenty case studies from the Public Education Leadership Project to determine how school improvement can be better sustained through organizational coherence, human capital management, and more.

Offering a primary focus on North American cultural and ethnic diversity while addressing global questions and issues, Counseling Across Cultures, Seventh Edition, edited by Paul B. Pederson, Walter J. Lonner, Juris G. Draguns, Joseph E. Trimble, and Mar í a R. Scharr ó n-del R í o, draws on the expertise of 48 invited contributors to examine the cultural context of accurate assessment and appropriate interventions in counseling diverse clients. The book 's chapters highlight work with African Americans, Asian Americans, Latinos/as, American Indians, refugees, individuals in marginalized situations, international students, those with widely varying religious beliefs, and many others. Edited by pioneers in multicultural counseling, this volume articulates the positive contributions that can be achieved when multicultural awareness is incorporated into the training of counselors.

"With the collaboration of a number of dedicated teachers and their students, Susan Empson and Linda Levi have produced a volume that is faithful to the basic principles of CGI while at the same time covering new ground with insight and innovation." -Thomas P. Carpenter This highly anticipated follow-up volume to the landmark Children's Mathematics: Cognitively Guided Instruction addresses the urgent need to help teachers understand and teach fraction concepts. Fractions remain one of the key stumbling blocks in math education, and here Empson and Levi lay a foundation for understanding fractions and decimals in ways that build conceptual learning. They show how the same kinds of intuitive knowledge and sense making that provides the basis for children's learning of whole number arithmetic can be extended to fractions and decimals. Just as they did in Children's Mathematics and Thinking Mathematically, Empson and Levi provide important insights into children's thinking and alternative approaches to solving problems. Three themes appear throughout the book: building meaning for fractions and decimals through discussing and solving word problems the progression of children's strategies for solving fraction word problems and equations from direct modeling through relational thinking designing instruction that capitalizes on students' relational thinking strategies to integrate algebra into teaching and learning fractions. With illuminating examples of student work, classroom vignettes, "Teacher Commentaries" from the field, sample problems and instructional guides provided in each chapter, you'll have all the tools you need to teach fractions and decimals with understanding and confidence.
