"A groundbreaking book that upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently"--

A New York Times bestseller Winner of the 2015 Samuel Johnson Prize for non-fiction A groundbreaking book that upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently. What is autism? A lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more—and the future of our society depends on our understanding it. WIRED reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for discovering it, and finds surprising answers to the crucial question of why the number of diagnoses has soared in recent years. Going back to the earliest days of autism research and chronicling the brave and lonely journey of autistic people and their families through the decades, Silberman provides long-sought solutions to the autism puzzle, while mapping out a path for our society toward a more humane world in which people with learning differences and those who love them have access to the resources they need to live happier, healthier, more secure, and more meaningful lives. Along the way, he reveals the untold story of Hans Asperger, the father of Asperger's syndrome, whose "little professors" were targeted by the darkest social-engineering experiment in human history; exposes the covert campaign by child psychiatrist Leo Kanner to suppress knowledge of the autism spectrum for fifty years; and casts light on the growing movement of "neurodiversity" activists seeking respect, support, technological innovation, accommodations in the workplace and in education, and the right to self-determination for those with cognitive differences.

Winner of the Samuel Johnson Prize for Non-Fiction 2015 A New York Times bestseller 'NeuroTribes is a sweeping and penetrating history, presented with a rare sympathy and sensitivity... it will change how you think of autism.' - From the foreword by Oliver Sacks What is autism: a devastating developmental disorder, a lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more - and the future of our society depends on our understanding it. Following on from his ground breaking article 'The Geek Syndrome', Wired reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for identifying it, and discovers why the number of diagnoses has soared in recent years. Going back to the earliest autism research and chronicling the brave and lonely journey of autistic people and their families through the decades, Silberman provides long-sought solutions to the

autism puzzle, while mapping out a path towards a more humane world in which people with learning differences have access to the resources they need to live happier and more meaningful lives. He reveals the untold story of Hans Asperger, whose 'little professors' were targeted by the darkest social-engineering experiment in human history; exposes the covert campaign by child psychiatrist Leo Kanner to suppress knowledge of the autism spectrum for fifty years; and casts light on the growing movement of 'neurodiversity' activists seeking respect, accommodations in the workplace and education, and the right to self-determination for those with cognitive differences.

This open access book marks the first historical overview of the autism rights branch of the neurodiversity movement, describing the activities and rationales of key leaders in their own words since it organized into a unique community in 1992. Sandwiched by editorial chapters that include critical analysis, the book contains 19 chapters by 21 authors about the forming of the autistic community and neurodiversity movement, progress in their influence on the broader autism community and field, and their possible threshold of the advocacy establishment. The actions covered are legendary in the autistic community, including manifestos such as "Don't Mourn for Us", mailing lists, websites or webpages, conferences, issue campaigns, academic project and journal, a book, and advisory roles. These actions have shifted the landscape toward viewing autism in social terms of human rights and identity to accept, rather than as a medical collection of deficits and symptoms to cure.

When anthropologist Richard Grinker's daughter was diagnosed with autism in 1994, it occurred in only about 1 in every 10,000 children. Within ten years, rates had skyrocketed, and the media was declaring autism an epidemic. *Unstrange Minds* documents Grinker's quest across the globe to discover the surprising truth about why autism is so much more common today. Grinker shows that the identification and treatment of autism depends on culture just as much as on science. Filled with moving stories and informed by the latest science, *Unstrange Minds* is a powerful testament to a father's quest for the truth.

"Parents, teachers, and policymakers should all read this thought-provoking book. I loved it."—Temple Grandin, author of *Thinking in Pictures*

Finalist for the 2017 Pulitzer Prize in General Nonfiction An extraordinary narrative history of autism: the riveting story of parents fighting for their children's civil rights; of doctors struggling to define autism; of ingenuity, self-advocacy, and profound social change. Nearly seventy-five years ago, Donald Triplett of Forest, Mississippi, became the first child diagnosed with autism.

Bookmark File PDF Neurotribes The Legacy Of Autism And The Future Of Neurodiversity

Beginning with his family's odyssey, *In a Different Key* tells the extraordinary story of this often misunderstood condition, and of the civil rights battles waged by the families of those who have it. Unfolding over decades, it is a beautifully rendered history of ordinary people determined to secure a place in the world for those with autism—by liberating children from dank institutions, campaigning for their right to go to school, challenging expert opinion on what it means to have autism, and persuading society to accept those who are different. It is the story of women like Ruth Sullivan, who rebelled against a medical establishment that blamed cold and rejecting “refrigerator mothers” for causing autism; and of fathers who pushed scientists to dig harder for treatments. Many others played starring roles too: doctors like Leo Kanner, who pioneered our understanding of autism; lawyers like Tom Gilhool, who took the families' battle for education to the courtroom; scientists who sparred over how to treat autism; and those with autism, like Temple Grandin, Alex Plank, and Ari Ne'eman, who explained their inner worlds and championed the philosophy of neurodiversity. This is also a story of fierce controversies—from the question of whether there is truly an autism “epidemic,” and whether vaccines played a part in it; to scandals involving “facilitated communication,” one of many treatments that have proved to be blind alleys; to stark disagreements about whether scientists should pursue a cure for autism. There are dark turns too: we learn about experimenters feeding LSD to children with autism, or shocking them with electricity to change their behavior; and the authors reveal compelling evidence that Hans Asperger, discoverer of the syndrome named after him, participated in the Nazi program that consigned disabled children to death. By turns intimate and panoramic, *In a Different Key* takes us on a journey from an era when families were shamed and children were condemned to institutions to one in which a cadre of people with autism push not simply for inclusion, but for a new understanding of autism: as difference rather than disability.

The third edition of *The Complete Autism Handbook* is a practical and comprehensive guide to every aspect of raising a child with Autism Spectrum Disorder (ASD) in Australia or New Zealand. The book has been updated with the latest information on early intervention, the NDIS and HCWA funding.

It's time to say NO to trying to fit square-peg kids into round holes, and YES to raising them from a place of acceptance and joy. Today millions of kids are stuck in a world that doesn't embrace who they really are. They are the one in five “differently wired” children with ADHD, dyslexia, giftedness, autism, anxiety, or other neurodifferences, and their challenges are many. And for the parents who love them, the challenges are just as numerous, as they struggle to find the right school, the right support, the right path. But now there's hope. *Differently Wired* is a revolutionary book—weaving together personal stories and a tool kit of expert advice from author Deborah Reber, it's a how-to, a

manifesto, and a reassuring companion for parents who can so often feel that they have no place to turn. At the heart of *Differently Wired* are 18 paradigm-shifting ideas—what the author calls “tilts,” which include how to accept and lean in to your role as a parent (#2: Get Out of Isolation and Connect). Deal with the challenges of parenting a differently wired child (#5: Parent from a Place of Possibility Instead of Fear). Support yourself (#11: Let Go of Your Impossible Expectations for Who You “Should” Be as a Parent). And seek community (#18: If It Doesn’t Exist, Create It). Taken together, it’s a lifesaving program to shift our thinking and actions in a way that not only improves the family dynamic, but also allows children to fully realize their best selves. “In this generous and urgent book, Deborah Reber lets the light in. She helps parents see that they’re not alone, and even better, delivers a positive action plan that will change lives.”—Seth Godin, author of *Linchpin* “*Differently Wired* will help parents of children who think differently to accept their child for who they are and facilitate their successful development.”—Temple Grandin, author of *Thinking in Pictures* and *The Autistic Brain*
