Composite Mathematics is a series of books for Pre Primer to Class 8 which conforms to the latest CBSE curriculum. The main aim of writing this series is to help the children understand difficult mathematical concepts in a simple manner in easy language.

New Mathematics Today, a thoroughly revised series for KG to Class 8, has been designed as per the requirements of the latest curriculum. The content of this series is designed to reach all learners in the classroom irrespective of their skill levels or learning capabilities.

As Felix Frankfurter and James Landis write in their preface to The Business of the Supreme Court, "To an extraordinary degree legal thinking dominates the United States. Every act of government, every law passed by Congress, every treaty ratified by the Senate, every executive order issued by the President is tested by legal considerations and may be subjected to the hazards of litigation. Other Nations, too, have a written Constitution. But no other country in the world leaves to the judiciary the powers which it exercises over us." This classic volume, first published in 1928, originated in a series of articles written by Frankfurter, then a professor of law at Harvard University, and his student, Landis, for the Harvard Law Review. These articles chronicled and analyzed the many judiciary acts that were passed between 1789 and 1925, and illuminated the intimate connection between form and substance in the life of American law. For instance: When a community first decided to enact zoning laws—the Supreme Court had to approve. When the United States made a treaty with Germany following World War I—the Supreme Court had to define the limits and meaning of the treaty. Newly reissued with an introduction by constitutional expert Richard G. Stevens, The Business of the Supreme Court is still as fresh and relevant today as it was when first published. It is a work that will aid the student of the law to both love the law and remain true to its purposes.

Toward a computational explanation of thought: an argument that underlying mind is a complex but compact program that corresponds to the underlying complex structure of the world.

This is a blank art book for those that like to doodle and draw. Cute butterfly design with a nice matte finish. Sketch while riding the bus, sitting at the park or just anytime and anywhere you like. Great gift for kids, teens, parents and grandparents. Matte Paperback 6x9 150 pages

Successful business alliances today are critical to the competitive advantage of many companies. Mastering Alliance Strategy presents state-of-the-art thinking and practices for using partnerships effectively. This essential resource will help you understand and use alliances better, whether you are a new or seasoned alliance professional, a business-development specialist, a line manager, or a top executive. The authors argue that the secrets to success lie not solely in the intricacies of a deal but also in the strategy and organization behind the deal. They draw ideas and tools from years of research and reporting on four elements that are key to an effective alliance strategy: " Designing the alliance and crafting the agreement " Managing the alliance after it is launched " Leveraging a constellation of alliances " Building an internal alliance capability

Types and causes of tube failures, what to expect from tubes, testing methods, and all about tube maintenance programs. Over 80% of all electronic equipment defects result, directly or indirectly, from tube failures. Why do tubes fail? What can be done to prevent them from failing before their time? How can you determine whether a tube is good or bad, or how well and how long it will work in a given circuit? Should tubes be replaced periodically, whether they've failed or not...or should they be tested every so often, and replaced if indications show them to be below par? This book supplies the answers to these and many many more questions!

Electrochromic materials are able to change their optical properties in a persistent and reversible way under the action of a voltage pulse. This book explores electrochromism among the metal oxides, with detailed discussions of materials preparation (primarily by thin film technology), materials characterization by (electro)chemical and physical techniques, optical properties, electrochromic device design, and device performance. The vast quantity of information presented is structured in a systematic manner and the optical data is interpreted within a novel conceptual framework. The publication will serve as a comprehensive foundation and reference work for future studies within the rapidly expanding field of electrochromic materials and devices. These devices are of particular interest for information displays, variable-transmittance (smart) windows, variable-reflectance mirrors and variable-emittance surfaces.
