When non-fed. public entities propose public works projects that could degrade or damage federally regulated waters and wetlands they must obtain a permit from the Army Corps of Engineers (ACE) before proceeding. To obtain the ACE's approval, the entity must submit a permit application. In 2000, the Congress included a provision in an Act to expedite permit processing for these entities. Sect. 214 of the act authorizes the ACE to accept and expend funds from these entities to expedite the evaluation of permit applications. Mittal believes that the ACE has taken appropriate steps to ensure that the

Land degradation reduces food productivity and security, disrupts vital ecosystem functions and increases carbon emissions and vulnerability to climate change. 52 percent of the land used for agriculture worldwide is estimated to already be affected. Studies indicate that land degradation directly affects 1.5 billion people around the world. Despite the seriousness of the issue, there is still limited access to resources and planning tools for sustainable land management. Between 2015 to 2019, FAO implemented the project "Decision support for mainstreaming and scaling up of sustainable land management (DS-SLM) ' ' at a global level across 15 countries. The aim of the project was to improve access to information on land management best practices. The final evaluation examines the impacts and sustainability of the project results. What has contributed to, or hindered, the implementation of the planned activities? What has been the effect of linkages and partnerships between the project and other major country initiatives?

The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. The Great Mental Models: General Thinking Concepts is the first book in The Great Mental Models series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand.

The way in which architectural decisions are made changes when more agile development methods are used. This chapter focuses on architectural decisions and how they are made in industrial settings. From our literature research and experience, we have constructed three axes on which the architectural decision process of projects or companies can be projected. We evaluate this framework with five industrial case studies in which we have participated. In all of the cases, the differences between two points in time (phases) were evaluated. These differences helped us identify what aspects influence the

efficiency of the project/company. The presented Triple-A Framework can be used in other projects to help locate places where the architectural process can be improved when the agility of a project changes.

Agile software development approaches have had significant impact on industrial software development practices. Today, agile software development has penetrated to most IT companies across the globe, with an intention to increase quality, productivity, and profitability. Comprehensive knowledge is needed to understand the architectural challenges involved in adopting and using agile approaches and industrial practices to deal with the development of large, architecturally challenging systems in an agile way. Agile Software Architecture focuses on gaps in the requirements of applying architecture-centric approaches and principles of agile software development and demystifies the agile architecture paradox. Readers will learn how agile and architectural cultures can co-exist and support each other according to the context. Moreover, this book will also provide useful leads for future research in architecture and agile to bridge such gaps by developing appropriate approaches that incorporate architecturally sound practices in agile methods. Presents a consolidated view of the state-of-art and state-of-practice as well as the newest research findings Identifies gaps in the requirements of applying architecture-centric approaches and principles of agile software development and demystifies the agile architecture paradox Explains whether or not and how agile and architectural cultures can co-exist and support each other depending upon the context Provides useful leads for future research in both architecture and agile to bridge such gaps by developing appropriate approaches, which incorporate architecturally sound practices in agile methods

uncertainty. The authors have developed the concept of a network of mgmt. studies with a rigorous experimental design to fill this need. Details on how to implement this generic landscape-scale mgmt. study on future wildfire areas are provided. They emphasize documenting expectations, conceptual modeling, scaling for major questions, analyzing for similarity, and monitoring cost-effectively. The design compares a range of mgmt. strategies at the landscape scale. Examples of more specific prescriptions for each of the strategies are provided, and the Tripod Fire in eastern Washington state in 2006 is used as an example.
