intracranial pressure, comes in the following parts. Since the patient with an injured brain can have chances only if other organs and systems (as the lungs, and the acid-base equilibrium etc.) are preserved, a section of the book covers the interactions between the affected

brain and other organs. The way the brain reacts to different insults has common aspects, as inflammatory responses, edema etc., but also specific features. Sections five to nine summarize the most relevant pathologies, from ischemic to hemorrhagic lesions,

trauma, tumors etc.
and also mentions
new comers, as the
specific problems
related to the
expanding field of
neuroradiological

neurointensive care
does not exist without

nurses. The
intracranial pressure
measurement starts
