Preceded by Exposure assessment in occupational and environmental
epidemiology / edited by Mark J. Nieuwenhuijsen. 1st ed. 2003.

The substantial burden of death and disability that results from interpersonal violence, road traffic injuries, unintentional injuries, occupational health risks, air pollution, climate change, and inadequate water and sanitation falls disproportionately on low- and middle-income countries. Injury Prevention and Environmental Health addresses the risk factors and presents updated data on the burden, as well as economic analyses of platforms and packages for delivering cost-effective and feasible interventions in these settings. The volume's contributors demonstrate that implementation of a range of prevention strategies-presented in an essential package of interventions and policies-could achieve a convergence in death and disability rates that would avert more than 7.5 million deaths a year.

Operational Risk Management offers peace of mind to business and government leaders who want their organizations to be ready for any contingency, no matter how extreme. This invaluable book is a preparatory resource for when times are good, and an emergency reference when times are bad. Operational Risk Management is destined to become every risk manager's ultimate weapon to help his or her organization survive ? no matter what.

This document provides a national approach to environmental health risk assessment. The document presents a general environmental health risk assessment methodology applicable to the range of environmental health hazards.

This book, Environmental Health Risk - Hazardous Factors to Living Species, is intended to provide a set of practical discussions and relevant tools for making risky decisions that require actions to reduce environmental health risk against environmental factors that may adversely impact human health or ecological balances. We aimed to compile information from diverse sources into a single volume to give some real examples extending concepts of those hazardous factors to living species that may stimulate new research ideas and trends in the relevant fields.

Environmental epidemiology is the study of disease and environmental

determinants of disease in humans, for example air pollution, water contamination, pesticides and telephone masts. This book describes the methods of environmental epidemiology and provides practical guidance on how to conduct studies on environmental problems and health effects.

Traffic-Related Air Pollution synthesizes and maps TRAP and its impact on human health at the individual and population level. The book analyzes mitigating standards and regulations with a focus on cities. It provides the methods and tools for assessing and quantifying the associated road traffic emissions, air pollution, exposure and population-based health impacts, while also illuminating the mechanisms underlying health impacts through clinical and toxicological research. Real-world implications are set alongside policy options, emerging technologies and best practices. Finally, the book recommends ways to influence discourse and policy to better account for the health impacts of TRAP and its societal costs. Overviews existing and emerging tools to assess TRAP's public health impacts Examines TRAP's health effects at the population level Explores the latest technologies and policies--alongside their potential effectiveness and adverse consequences--for mitigating TRAP Guides on how methods and tools can leverage teaching, practice and policymaking to ameliorate TRAP and its effects
