SFI Group System - unizg.hr

Through the ships' lifetime, the SFI coding system is used for different purposes, like control of shipping, offshore or shipbuilding operations. In cost management, this structure works as a cost work breakdown structure. The ship is divided into 10 main groups from 0 to 9, but often only main group 1-8 are used (refer Table 3).

SHIP WORK BREAKDOWN STRUCTURES THROUGH DIFFERENT SHIP ...

The SFI Group System is designed to conform to a logical ship's specification, to accurately collect direct costs during the phases, and to organize the return costs in a as a basis for estimating the cost of similar design, planning and production way that they can easily be used ships in the future.

development; ICT for collaborative manufacturing; collaborative technology; applications of machine learning in production management; and collaborative technology.

Since it was first published in 1964, Elements of Shipping has become established as a market leader. Now this new edition has been entirely updated and revised to take in the many changes that have occurred in the shipping industry in recent years and the increased emphasis placed on professionalism, qualified personnel and the need for the latest available technology. With new chapters on seaports and electronic data interchange, it explains in a lucid, professional manner the basic elements of shipping embracing operating, e-commerce/computerization (shipboard/trade), commercial, legal, economic, technical, managerial, logistics and financial considerations. It also reflects recent major trends including the impact of globalization, current good practice and future trends. All twenty-two chapters have been updated and over half of the content is new. Filling a gap for the discerning reader who wishes to have a complete understanding of all the elements of the global shipping scene together with the interface with seaports, international trade and logistics, it remains essential reading for shipping executives along with students and academics with an interest in the shipping industry.

Since it was first published in 1964, Elements of Shipping has become established as a market leader. Now in its ninth edition, Branch's Elements of Shipping, renamed in memory of Alan

Read Book Sfi Coding

Branch, has been updated throughout and revised to take in the many changes that have occurred in the shipping industry in recent years, including the impact of the economic crisis, the Panama Canal expansion and new legislation. All tables and data have been brought up-to-date and many new illustrations have been added. The book explains in a lucid, professional manner the basic elements of shipping, including operational, commercial, legal, economic, technical, managerial, logistical and financial considerations. It also explores how shipping markets behave and provides an overview of the international shipping industry and seaports. Filling a gap for the discerning reader who wishes to have a complete understanding of all the elements of the global shipping scene together with the interface with seaports, international trade and logistics, it remains essential reading for shipping executives along with students and academics with an interest in the shipping industry.

This book elucidates the potential of the shipbuilding industry for initiating economic development, which eventually leads to enhancing the prosperity of a nation. This is explained by intrinsically linking the macroeconomics of the nation with the microeconomics of the shipbuilding industry. The economic and commercial spin offs by the shipyard to the various industries have been analysed and calculated. An attempt has been made to trace the illustrious past of Indian shipbuilding from the Bronze Age, through the ancient kingdom period, to the present times, in the backdrop of Indian maritime history. The operational requirement of commercial as well as defence shipbuilding has been analysed to assess the available potential market space for the Indian shipbuilding industry. Lessons from history help to formulate future strategies. In pursuit of this, the book investigates the global trends in

Read Book Sfi Coding

commercial shipbuilding since the industrial revolution period to date; the success stories of leading shipbuilding nations viz. UK, USA, Japan, Korea and China have been analysed. The benefits accrued by these nations through shipbuilding have been summarised. The strategies adopted by each of these countries to reach the pinnacle in shipbuilding have been examined and the salient features relevant for India have been identified. Productivity measurement in shipbuilding has been examined and the problems with the current system have been highlighted, along with solutions. This book suggests the usage of Data Envelopment Analysis (DEA), a mathematical linear programming technique, as an appropriate tool to measure total productivity as well as profitability. The various ways of improving profitability in shipbuilding, by way of cost-cutting techniques, along with some Indian case studies have been explained in the book. Keeping the 'Indian Maritime Agenda 2010-2020' vision document in the backdrop, a strategic appreciation of the Indian shipbuilding industry has been undertaken using the SWOT, the Matrix and the Scenario analyses. Based on these analyses, strategies have been formulated for all the stakeholders who can influence the Indian shipbuilding industry. The book then identifies the need for an alchemist leader, who can harmonise all the stakeholders and thereby propel the Indian shipbuilding industry towards achieving the long-term goal of creating a prosperous India.

"More and more people working in the public services have to do research in addition to their main jobs. This can include workplace research, such as evaluation, audit, training needs analysis or satisfaction surveys, or research for a professional development qualification such as a diploma, Master's degree or PhD...This book is for anyone in the public or third sector, an

independent research organization or academia, who wants to know how to do research on top of their main job and still have a life" -- Back cover

This book constitutes the refereed proceedings of the 29th annual European Conference on Information Retrieval Research, ECIR 2007, held in Rome, Italy in April 2007. The papers are organized in topical sections on theory and design, efficiency, peer-to-peer networks, result merging, queries, relevance feedback, evaluation, classification and clustering, filtering, topic identification, expert finding, XML IR, Web IR, and multimedia IR.

Research doesn't exist in a bubble but co-exists with a multitude of other tasks and commitments, yet there is more need for people to save time than ever before. Brilliantly attuned to the demands placed on researchers, this book considers how students, academics and professionals alike can save time and stress without compromising the quality of their research or its outcomes. Including a new foreword by Patrick Sturgis, Director of UK National Centre for Research Methods, this second edition is fully revised. It provides a new chapter on methodologies covering a range of approaches, and a wealth of updated practical information. Each chapter concludes with annotated further readings and the volume is accompanied by a fully revised and updated companion website. This supportive book is designed for any student or practitioner who wants to know how to do research on top of their main job and still have a life.
