With classroom response systems (or CRSs, also known as Student Response

or, informally,

“clickers”) in use in

higher education for

some 20 years, there

is now both ample

research and a wealth

of examples and

faculty who are

contemplating their

use, or exploring new

ways to integrate

them in their

teaching. The

research

demonstrates that,

integrated

purposefully in

courses, the use of

clickers aligns with

what neuroscience

tells us about the

of learning. In

addition, they elicit

current best

practices, and then

presents seven

chapters providing

Online Library

The Physics

authentic, effective examples of the use of clickers across a wide range of academic disciplines, demonstrating how they can be effective in helping students to recognize their misconceptions and grasp fundamental concepts. Like all pedagogical interventions,

Online Library

The Physics

classroom response systems are no panacea, and the experienced contributors candidly describe avoidable pitfalls while demonstrating how clickers can deepen student learning and how, by providing instantaneous feedback, they enable teachers to

make adjustments on the fly to better address student understandings or misunderstandings.

The final chapter explores pros and cons of response systems that use mobile devices and smart phones, and the book concludes with an annotated list of further resources,

articles, and videos.
