1912 London. Jessie Kenton hears her young brother, Georgie, scream in the middle of the night and wakes up the next morning to find him gone. Her parents never speak of him again. 1932. Twenty years later, Jessie is haunted by the same nightmare. Her other brother, Timothy, has inexplicably vanished from her parents' home. Wracked by guilt because of her failure to ever find Georgie, and convinced that

the two events must be related, she sets out on a quest to find Timothy. She plunges into a mysterious world of séances and mystics, nebulous clues and Egyptian artifacts. With the help of a dashing and impoverished aristocrat, Sir Montague Chamford, Jessie follows the trail into the alien, swirling sands of the Egyptian desert. Amid the ancient intrigue and blistering heat, a powerful romance sparks between Jessie and Monty. But they must first confront the demons of Jessie's past and reveal the dark secrets that threaten not only Timothy's life but theirs as well.

Knowledge-based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use. While there have been many successful applications of knowledge-based systems, some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users' needs in their actual working environment. This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge-based systems during their development. Its focus is on the users' and subject matter experts' evaluation of the usefulness of the system, and not on the developers' testing of the adequacy of the programming code. The handbook permits evaluators to systematically answer the following kinds of questions: Does the knowledge-based system meet the users' task requirements? Is the system easy to use? Is the knowledge base logically consistent? Does it meet the required level of expertise? Does the system improve performance? The authors have produced a handbook that will serve two audiences: a tool that can be used to create knowledge-based systems (practitioners, developers, and evaluators) and a framework that will stimulate more research in the area (academic researchers and students). To accomplish this, the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process. The kinds of questions that can be answered, and the methods available for answering them, will change throughout the system development life cycle. And throughout this process, one needs to know what can be done, and what can't. It is this dichotomy that addresses needs in both the practitioner and academic research audiences.

Practical, easy-to-read, mathematically accessible - and filled with an abundance of real-life examples - this book explains how to collect data on investment properties, how to use the HP-12C financial calculator to process data, and how to interpret the data to make decisions on buying, selling or keeping an income producing property. The procedures are applicable to any property owned or considered for purchase.

This book explores the historiography, ports, and peoples of the Persian Gulf over the past two centuries, offering a more inclusive history of the region than previously available. Restoring the history of minority communities which until now have been silenced, the book provides a corrective to the 'official story' put forward by modern states.
