"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope
Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in

chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

"Connect is a four-level, four-skills American English course for young adolescents. Connect encourages students to connect to English through contemporary, high-interest topics and contexts, fun dialogs, and games. Each student's book includes grammar and vocabulary presentations and a multi-skills, graded syllabus"--Provided by publisher.

The world's most popular spreadsheet program is now more powerful than ever, but it's also more complex. That's where this Missing Manual comes in. With crystal-clear explanations and hands-on examples, Excel 2013: The Missing Manual shows you how to master Excel so you can easily track, analyze, and chart your data. You'll be using new features like PowerPivot and Flash Fill in no time. The important stuff you need to know: Go from novice to ace. Learn how to analyze your data, from writing your first formula to charting your results. Illustrate trends. Discover the clearest way to present your data using Excel's new Quick Analysis feature. Broaden your analysis. Use pivot tables, slicers, and timelines to examine your data from different perspectives. Import data. Pull data from a variety of sources, including website data feeds and corporate databases. Work from the Web. Launch and manage your workbooks on the road, using the new Excel Web App. Share your worksheets. Store Excel files on SkyDrive and collaborate with colleagues on Facebook, Twitter, and LinkedIn. Master the new data model. Use PowerPivot to work with millions of rows of data. Make calculations. Review financial data,

use math and scientific formulas, and perform statistical analyses.

Tour of a Lesson PRE-READING introduces students to the theme of the reading. It does this by introductory pictures and asking questions about them to test their understanding of the vocabulary in the reading text. This is done through matching exercises and choosing the correct answers from a supplied list. READING TEXT focuses the students on the reading and requires students to reflect on their pre-reading activities when applicable. Students read silently first. They are not expected to understand every word; they should be encouraged to read for the general meaning and to use contextual clues and their university background knowledge to aid comprehension. Many of the readings are in the form of conversations involving many people. This gives the students the opportunity to perform role play and switch roles. COMPREHENSION QUESTIONS provides students with an opportunity to read the whole text or parts of it while looking for specific information to answer a set of comprehension questions. In addition, students are asked to identify meanings of words and expressions in the reading text. This practice allows them to make inferences about meanings and asks them to demonstrate their comprehension of the readings in a variety of ways, such as using vocabulary in context.

VOCABULARY & UNDERSTANDING introduces vocabulary in context. Students match different vocabulary items with their descriptions. This section tests students' understanding of the readings by asking content questions. LANGUAGE FOCUS includes grammar in practice where students are asked to differentiate between grammatical structures and understand their functional usage. Students are also asked to provide written output in the form of linguistic structures which reflect the structures covered in the readings.

Thrill young astronomers with a journey through our Solar System. Our resource presents science concepts in a way that makes them accessible to students and easier to understand. Introduce students to the solar system. Explain how it is made up of planets, moons and asteroids. Then, travel to each of the inner and outer planets. Build a scale model of the solar system, and plan your trip to one of its planets. Your next stop, the moon. Learn the different phases of the moon and figure out what a Blue Moon is. Take a look at the stars and compare yellow dwarfs with blue giants. Create a presentation detailing the story behind your favorite constellation. Finally, compare asteroids, meteors and comets as they travel through our solar system. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

Get the big picture about the Universe with our Space and Beyond 3-book BUNDLE. Start things off in our own backyard with a look at our Solar System. Travel to each of the inner and outer planets. Build a scale model of the solar system, and plan your trip to one of its planets. Next, travel a little further out to look at Galaxies & The Universe. Learn how distance is measured in light years, and how far the next closest star is to Earth. Find out how much you would weigh on the sun, moon and planets. Finally, learn what it's like to live in space with Space Travel & Technology. Blast off into space with manned and unmanned spacecrafts. Learn about life aboard the International Space Station, and predict how different toys would work in space. Each concept is paired with hands-on activities and experiments. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional crossword, word search, comprehension quiz and answer key are also included.
