After Karl Jöreskog's first presentation in 1970, Structural Equation Modelling or SEM has become a main statistical tool in many fields of science. It is the standard approach of factor analytic and causal modelling in such diverse fields as sociology, education, psychology, economics, management and medical sciences. In addition to an extension of its application area, Structural Equation Modelling also features a continual renewal and extension of its theoretical background. The sixteen contributions to this book, written by experts from many countries, present important new developments and interesting applications in Structural Equation Modelling. The book addresses methodologists and statisticians professionally dealing with Structural Equation Modelling to enhance their knowledge of the type of models covered and the technical problems involved in their formulation. In addition, the book offers applied researchers new ideas about the use of Structural Equation Modeling in solving their problems. Finally, methodologists, mathematicians and applied researchers alike are addressed, who simply want to update their knowledge of recent approaches in data analysis and mathematical modelling.

Inhaltsangabe:Introduction: The approach of this research paper is to give an overview about the Chinese automotive industry. An analysis of the People s Republic of China (PRC) shows the investment possibilities for foreign automotive manufactures. This research introduces the major opportunities and threats of political, social, economical, environmental, technological and legal dimensions within China. In the first part the Political System will be analysed by Christian Lutz. The historical and cultural roots are important to understand the political developments. The theoretical and actual political system and their problems will be shown. He also reflects the Social System with its different specifications. The current fall-back system with community health, retirement pension and unemployment will be analysed. Furthermore the potential opportunities and risks for automotive investors will be addressed. In the third part Economy Benjamin Pflüger point out that China is potentially the largest and one of the fastest-growing automotive markets in the world and therefore significant for all foreign automobile manufactures. There are both great opportunities and possible threats existing in China. The huge population, economic growth, increasing income and improved environment for consumers as well as China`s membership of the World Trade Organisation (WTO) are important for the future development of the global economy. This also leads to unavoidable consequences for the environment. The current situation and the environmental impact of

China`s motorization, such as infrastructure shortage and air pollution, will be presented in sup-
topic Environment . In the fifth chapter Technology Thorsten Iwanowski will introduce aspects
of technology and technology management in China. As nowadays the main form of
investment is the joint venture, this will be focused. The accelerating technological
development within the last decades does not only generate advantages for the Chinese
people. After having created several constitutions within the last 50 years, a modern and future
oriented one has been passed. This constitution basing the new legal system will require fast
and further legal rules and laws to meet the challenges of the Chinese future. These
circumstances and their influence on the automobile industry will be pointed out in the part
Legal System . The last years show an increasing volume of Foreign Invested Enterprises
(FIE) within [...]

The automotive industry is waking up to the fact that hybrid electric vehicles could provide an
answer to the ever-increasing need for lower-polluting and more fuel-efficient forms of personal
transport. This is the first book to give comprehensive coverage of all aspects of the hybrid
vehicle design, from its power plant and energy storage systems, to supporting chassis
subsystems necessary for realizing hybrid modes of operation. Key topics covered include
hybrid propulsion system architectures, propulsion system sizing, electric traction system
sizing and design, loss mechanisms, system simulation and vehicle certification. Offering in-
depth coverage of hybrid propulsion topics, energy storage systems and modelling, and

supporting electrical systems, this book will be an invaluable resource for practicing engineers and managers involved in all aspects of hybrid vehicle development, modelling, simulation and testing. It will also be of interest to postgraduate students in the field. About the Author: Dr. John M. Miller is founder of J-N-J Design Services P.L.C., where he serves as principal engineer. Dr. Miller worked for 20 years on electric and hybrid vehicle programs and vehicle electrical system simulation at the Ford Motor Company research laboratories. He was technical project leader of Ford's 42V Integrated Starter Generator (ISG) product development program, and represented Ford on several high visibility initiatives, including the US Department of Energy's partnership for a new generation of vehicle (PNGV) initiative and the Virginia Institute of Technology and State University lead NSF Center for Power Electronic Systems (CPES). He remains active on the MIT-Industry Consortium on Advanced Automotive Electrical and Electronic Components, and is an adjunct professor at Michigan State University, where he has taught a graduate-level course in electrical machines and drives, and at Texas A&M University, where he has lectured on hybrid propulsion systems. Dr. Miller holds 43 US patents and has authored 106 publications on automotive electrical and electronic systems. He is a Fellow of the IEEE.

Offers background information, descriptions, and values for banks, classic tin toys, action figures, games, Western toys, model kits, and other types of toys.
